AI ETHICS & GOVERNANCE · UK Professional Certification Course

A NOTE BEFORE YOU BEGIN

This is an 8 hour course organised into six modules, written for people in any industry and assuming no technical or legal background. It moves from what AI ethics and governance are, through the core principles and the recognised failure patterns, to UK data protection law, practical governance structures and the everyday use of generative AI at work. Each module includes core content, diagrams, real documented case studies, boxed key takeaways and a five-question check-in quiz. Complete the modules in order, then sit the 30-question Final Certification Exam. A mark of 70% (21 out of 30) or higher is required to achieve certification.

01	Introduction to AI Ethics and Governance	1 hr
02	The Core Principles	1.5 hrs
03	Using AI Responsibly Day to Day	1 hr
04	How and Why AI Systems Fail	1.5 hrs
05	The Rules: UK Law and the Regulatory Landscape	1.5 hrs
06	Governance in Practice	1.5 hrs
—	Final Certification Exam (30 questions)	45 mins
—	Answer Key	

Certification Requirements

- Complete all six modules in sequence, including the module check-in quizzes.
- Work through the applied exercise in each module, individually or in a facilitated cohort.
- Be able to explain, in your own words, the six core principles and the five risk categories.
- Achieve a mark of at least 70% (21 out of 30) in the Final Certification Exam.
- Complete the Module 6 capstone exercise, applying the course to one real AI system, and have it verified by the system owner or a nominated assessor.

UK IN FOCUS

This course is written for a UK context. It refers throughout to UK regulators and legislation — including the Information Commissioner’s Office (ICO), the UK GDPR, the Data Protection Act 2018, the Data (Use and Access) Act 2025 and the Equality Act 2010 — rather than to EU or US frameworks, although both are outlined for comparison in Module 5. The examples are drawn from a deliberately wide range of sectors, because the failure patterns and the remedies are consistent across them.
